Reviewer's report

Title: Occupational Exposure to Blood, Hepatitis B Vaccine Knowledge and Uptake among Medical Students in Cameroon.

Version: 2 Date: 30 April 2013

Reviewer: Andrea Trevisan

Reviewer's report:

1. The manuscript is clear and conclusions are sound with the aim of the study
2. I have only observation: it is not clear because of 440 eligible medical students only 111 were enrolled.
3. Nevertheless the low number of enrolled individuals, I believe that studies in HBV high endemicity countries such as Africa are always welcome because they encourage people to improve the health surveillance and the prevention of infectious diseases.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
