Reviewer’s report

Title: Occupational Exposure to Blood, Hepatitis B Vaccine Knowledge and Uptake among Medical Students in Cameroon.

Version: 4 Date: 11 August 2013

Reviewer: Farahnaz Joukar

Reviewer's report:

I study the article entitled “Occupational Exposure to Blood, Hepatitis B Vaccine Knowledge and Uptake among Medical Students in Cameroon” after revision. The mistakes are approximately corrected but in my opinion the main mistake of the article is in presenting the result. Table 1 can be written in the text and be deleted. Only the correct answers can be written in table 2 and it's not necessary to mention the percentages and frequency of incorrect and Do not know. Please pay attention to this article: Knowledge and attitude of medical science students toward hepatitis B and C infections Int J Clin Exp Med 2013;6(3):197-205.

In the table 2 the correct answer to (Are you at risk of HBV infection more than the general population?) Is not cleared. Please do not write not significant P value and write it in this way NS.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
