Reviewer's report

Title: Patient and preceptor attitudes towards teaching medical students in General Practice.

Version: 1 Date: 2 February 2013

Reviewer: Meredith Makeham

Reviewer's report:

Overall this was an elegant investigation of a simple yet important research question. The study was well constructed and the paper was clearly presented. The statistical analyses were appropriately chosen for the data, although I have not repeated any calculations. I congratulate the authors on a very well written piece. There are no major revisions suggested.

Minor revisions

Typographical: 1. (Abstract) Results: fifty nine...

Discretionary revisions

1. Keywords in abstract: I would suggest including 'doctor-patient relationship' and 'medical student'

2. GPs and Patients page 4: "All of them were single handed" suggest change to "All of them were solo practitioners"

3. Results page 6: Check the translation of the phrase "I feel motivated for this kind of teaching because I can present my specialty.". I wonder if the word 'demonstrate' may be a better fit than 'present'?

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
