Reviewer's report

**Title:** Mobile NBM - Android medical mobile application designed to help in learning how to identify the different regions of interest in the brain's white matter

**Version:** 3  
**Date:** 23 April 2014

**Reviewer:** Samuel R Hall

**Reviewer's report:**

The revised manuscript has attended to most of my original suggestions however I feel the following areas still need to be addressed.

Minor criteria:

1) The description of the explanation/examination/sharing module is still duplicated in the methods and results section.

2) The results refer to non-parametric data but use a t-test which is a parametric statistical test.

3) The participants are referred to as “professionals”. It would be beneficial to mention which specialties and grades. Is this App better suited to those in training or full consultants etc.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** Yes, but I do not feel adequately qualified to assess the statistics.

**Declaration of competing interests:**

'I declare that I have no competing interests'
