Reviewer's report

Title: A Delphi consensus study to identify current clinically most valuable orthopaedic anatomy components for teaching medical students

Version: 1 Date: 14 April 2014

Reviewer: R. Shane Tubbs

Reviewer's report:

Major Compulsory Revisions:

This is a well done and timely study. The authors might also consider the following references:

Were specific anatomical structures queried in the survey? Table 1 lists "Shoulder joint anatomy" but are there details that could be provide. For example, should the student know the coracohumeral ligament? Furthermore, Table 2 states "Basic awareness of osteology." Does this mean that the student merely need to know the bones or should they know the bones and various parts e.g. adductor tubercle?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
