Reviewer’s report

Title: A Delphi consensus study to identify current clinically most valuable orthopaedic anatomy components for teaching medical students

Version: 1 Date: 28 June 2014

Reviewer: Benjamin Taylor

Reviewer’s report:

This is an investigation into what senior level orthopedic surgeons think is the most relevant information in an anatomy curriculum.

The study is only interesting to see what they think is relevant, but for a paper to have the power to make suggestions to the various medical schools, you would need non-orthopaedic surgeons as well.

Major revisions: None
Minor revisions: None
Discretionary revisions: None

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
