Reviewer’s report

Title: The Need for Education on Health Related-Quality of Life

Version: 1 Date: 24 October 2007

Reviewer: David M. Latini

Reviewer’s report:

General
This is a well-written and informative short piece describing a new specialized educational module on health-related quality of life for undergraduate medical students. The authors describe the content of the new module and the process for delivering the content to the small group of enrolled students. The tables and boxes are very helpful in providing detailed information about the module.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
None

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
None

Discretionary Revisions (which the author can choose to ignore)
It might be helpful if the authors briefly described how the British medical education program is set up. This description might give medical educators not familiar with that system a little more context that would be helpful in understanding how such a module could be incorporated into medical education in their own country. It also would be helpful to know how the module content is related to the ISOQOL recommendations and whether the module contents are available to other medical educators.

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable
**Statistical review:** No, the manuscript does not need to be seen by a statistician.
