Reviewer’s report

Title: Development of a Food Allergy Education Resource for Primary Care Physicians

Version: 1 Date: 11 July 2008

Reviewer: Robert K Bush

Reviewer’s report:

This is a well done report on the need for and success of an educational program on food allergy for primary care physicians.

Discretionary revisions:

1. I am not sure that tables 3 and 4 are necessary.

2. Table 2B, I believe, indicates the reasons primary care physicians refer patients with food allergy symptoms. It might be better to compare these responses to accepted guidelines, ie, list the guideline criteria and the number / % of participants who responded appropriately.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

I am an associate editor of the Journal of Allergy and Clinical Immunology.
