Reviewer's report

Title: Development of a Food Allergy Education Resource for Primary Care Physicians

Version: 1 Date: 21 July 2008

Reviewer: Scott Krugman

Reviewer's report:

Overall I found the article to be well written with an important research question being assessed: can physician knowledge of food allergies be improved. The design of prior survey assessment followed by educational intervention is appropriate and well done. The data seems sound. The conclusions are appropriate, but there needs to be greater acknowledgement of the limitations of the study. Specifically, the sample size is small, the intervention was done in 2 academic settings only. Mentioning the ongoing modifications to the program is important, but one conclusion may be to replicate the study in a practice based research network to see if the same program works in a practice rather than academic setting.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
