Reviewer's report

Title: Satisfaction with Web-Based Training in an Integrated Healthcare Delivery Network: Do Age, Education, Computer Skills or Attitudes Matter?

Version: 2 Date: 22 August 2008

Reviewer: Girdhar Agarwal

Reviewer's report:

I have confined myself to “Statistical Analysis” part.

1. It is possible to compare the demographic profile of responders vs no responders?

2. For reporting the results on “satisfaction” use median and interquartile range instead of mean and standard deviation (p. 11). Figure 2 should be modified accordingly as it is treating “Satisfaction” as a continuous variable.

3. Figure 1 can be avoided.

4. para 1, p.10. It should read as follows: The constructs identified by factor analysis were assessed to find univariate association with satisfaction. But here it is not clear how Kruskal-Wallis test is being used to find this association.

5. Table 2 heading should be: Ordinal regression analysis.

6. The model used in Multivariable ordinal regression should be mentioned.
