Reviewer's report

Title: An intercalated BSc degree is associated with higher marks in subsequent medical school examinations

Version: 2 Date: 10 March 2009

Reviewer: David Alan Powis

Reviewer's report:

I have read the revised article and noted that the authors now report association between intercalated studies and subsequent performance at medical school examinations rather than implying causality between the two. This is entirely appropriate. The article reads well. I have no further suggestions to make.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
