Reviewer's report

Title: Interns' knowledge of clinical pharmacology and therapeutics after undergraduate training in Nigeria

Version: 2 Date: 26 May 2009

Reviewer: Simon R Maxwell

Reviewer's report:

There has been an advance in that the numerous weaknesses in this study are now better highlighted and recognised. Having seen the questionnaire I would suggest that some of the questions are a bit leading and there is no control for the responses about CPT. This can only be considered a small pilot study that should allow the authors to redesign their approach for a definitive study. There are simply too many variables to make the results of this study of relevance to a wider international audience. I am still concerned that there is a lack of precision and detail - for instance the title itself is misleading since most respondents had both undergraduate and postgraduate experience and the study doesn't test knowledge but self-rated confidence.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
