Reviewer's report

Title: Continuing Medical Education Challenges in Chronic Fatigue Syndrome

Version: 1 Date: 22 June 2009

Reviewer: Eva Libman

Reviewer's report:

This is a clearly written, comprehensive descriptive study that evaluates multiple parameters in the process of knowledge dissemination in the area of chronic fatigue syndrome. This is a unique study that may provide an empirical basis for selecting the most effective modality for disseminating educational materials in CFS as well as other similarly underdiagnosed disorders - e.g. sleep apnea.

Minor Revision:
I would suggest that the authors include specific recommendations for knowledge dissemination regarding CFS, based on their presented data. It would also be appropriate to indicate that their procedure may be used as a template for evaluating the process in other health disorders.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
I declare I have no competing interests.
