Reviewer's report

Title: Knowledge, Attitudes and Practices survey on Organ Donation among a Selected Adult Population of Pakistan

Version: 2 Date: 8 April 2009

Reviewer: Leonardo D. de Castro

Reviewer's report:

Bottom of page 6:

It is not clear to me how the following are "factors associated with the knowledge regarding organ transplantation and donation": blood type makes a difference in donation (69%), transplant survival rates are high (61.6%), transplants can come from living donors (75.9%). Sentence ought to be rewritten.

Otherwise, response to earlier comments is acceptable.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
