Reviewer’s report

Title: Technology assessment and resource allocation for predictive genetic testing: A pilot study of the perspectives of Canadian genetic health care providers

Version: 2 Date: 9 December 2008

Reviewer: Saskia Sanderson

Reviewer’s report:

The authors have significantly improved the manuscript. It is now quite interesting and much easier to read, and will make a reasonable contribution to the literature. I have only two very minor comments below.

Discretionary Revisions:

p5 para 1: Should "These interviewers" read "These interviews"?

p18: The word "improved" is still in place (should this be "approved"?)

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
