Reviewer's report

Title: Is informed consent related to success in exercise and diet intervention as evaluated at 12 months? DR's EXTRA study

Version: 2 Date: 19 October 2009

Reviewer: Barton Palmer

Reviewer's report:

This is a responsive revision, and interesting paper and study. The exploratory/hypothesis generating intent of the study is now explicitly and appropriately noted on page 8 of the manuscript. This intent should be reiterated in the Abstract and Conclusions paragraph, as those may be the only sections some casual readers may attend to. I have no other suggestions for further revision of this interesting and well written paper.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
