Reviewer's report

Title: An effective multisource informed consent procedure for research and clinical practice: an observational study on patient understanding and awareness as a research stakeholder in a cancer biobank

Version: 2 Date: 26 August 2012

Reviewer: SUSAN SLOVIN

Reviewer's report:

Other than providing multiple personnel to discuss the informed consent and foster greater explanations to the patient, the paper does not represent anything more than indicating how to foster greater compliance with understanding of enrollment procedures. This is likely to be institutionally exclusive and does not represent what is being done through larger academic center.

Level of interest: An article of limited interest

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.
