Reviewer's report

Title: Knowledge and Ethical Perceptions regarding Organ Donation among Medical Students in Pakistan

Version: 1 Date: 27 March 2013

Reviewer: Thomas W Feeley

Reviewer's report:

Major Revisions
The study is an important one that suffers from a small sample size on two ends of the educational spectrum. The study would be vastly better if the entire student population of this school and perhaps others were included so that some of the issues raised by the authors requiring further study could be addressed directly in this manuscript. For example, on page 13 the authors note that the willingness to donate was lower among these medical students than the general population. A larger sample size and more directed questions might address this issue.

Minor Revisions
The use of $p<0.001$ is more conventional that 000

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.
