Reviewer’s report

Title: An Implementation Framework for the Feedback of Individual Research Results and Incidental Findings in Research

Version: 5 Date: 10 September 2014

Reviewer: Pieter Hendrik Jan H Riegman

Reviewer’s report:

The adjustments and additions made to the manuscript after challenging the authors with other views to the subjects presented in the manuscript are adequate to publish the manuscript in the present state. Although the reaction where even the authors reaction describes it as an important point was a bit disappointing at first glance. It concerned the issue where feedback of IRR can only take place if the laboratory and the test both comply to the rules of an in vitro diagnostic lab / test. All in all the challenges were answered adequately and hopefully the discussion on this important point will be taken up elsewhere.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
