Title: Computerized Clinical Documentation System in the Pediatric Intensive Care Unit

Authors:

James A Menke MD, MS (menkej@pediatrics.ohio-state.edu)
Cynthia W Broner MD (menkej@pediatrics.ohio-state.edu)
Deborah Y Campbell RN (campbeld@musc.edu)
Michelle Y Mckissick RN (McKissiM@chi.osu.edu)
Joy Edwards-Beckett PhD (jedwardsbeckett@yahoo.com)

Version: 1 Date: 28 Aug 2001

Reviewer: Susan Conley

Level of interest: A paper of considerable general medical or scientific interest

Advice on publication: Accept without revision

1. This paper is very well-written, interesting, and appropriately succinct. It reads very easily and logically.
2. It is of considerable use to clinicians, particularly pediatricians, but to all clinicians thinking of using a computerized data entry system for patient care.
3. The finding of no increase in time for patient care is interesting. A followup short study in a year would be of interest.
