Reviewer's report

Title: Development of a Real-Time Clinical Decision Support System upon the Web MVC-based Architecture for Prostate Cancer Treatment

Version: 5 Date: 11 January 2011

Reviewer: James E Till

Reviewer's report:

I think that the numbered points raised by Dr. Cimino were dealt with adequately by the authors.

However, like Dr. Cimino, I found the language in this paper difficult to follow, and could not determine the value of the work. I think that the language issue has not been resolved by the revisions that have been made. So, I doubt if further revisions would be helpful. The problem is not simply lack of familiarity with English. It's an issue of style of writing.

Is the language issue serious enough to influence the decision about publication? The first reviewer (Alexandra Floares) apparently thinks that the language in the revised paper is acceptable. In the absence of an opinion from Dr. Cimino about the language of the revised version, perhaps Dr. Floares' opinion should be accepted.
