Reviewer's report

Title: Automatic Segmentation of Meningioma from Non-Contrasted Brain MRI Integrating Fuzzy Clustering and Region Growing

Version: 5 Date: 23 March 2011

Reviewer: Kyrre Emblem

Reviewer's report:

The authors have made answered my original criticism in a sufficient manner.

Minor Essential Revision Comment:
The authors should not use statistical words such as ‘significant’ if this is not describing the results of a statistical test. An example of this is the use of ‘significant edema’, while I fail to see a test of what significant edema is.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests
