Reviewer's report

Title: Attitudes among Healthcare Professionals towards ICT and Home Follow-up in Chronic Heart Failure Care

Version: 2 Date: 5 September 2012

Reviewer: Anne Moen

Reviewer's report:

Thank you for your careful revision of the paper. Still, on page 11-12 there are some issues with the flow of the text and argument, and the empirical evidence in the graphs and the corresponding text. For example, on the last paragraph, page 11 you talk about confidence and then switch straight to cost, you equate use of computers with interest (what if work require you to use computers but could care less?). On page 12 you seem to present a graph about possibilities and report on experiences in the text.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
