Reviewer's report

Title: Evaluation of the use of decision-support software in Carcino-Embryonic Antigen (CEA)-based follow-up of patients with colorectal cancer

Version: 3  Date: 9 February 2012

Reviewer: Alejandro Pazos

Reviewer's report:

They have realized the opportune modifications in the isolated "Follow up schedule"
- Have incorporating a new paragraph "Discussion" - They have corrected the failures of style
- Have clarified enough things it brings over of the Software.

For this reasons, it seems that the article might published without new corrections

PD: The analysis of the SW shows that, though it is sufficient for the task carried out in the present work of investigation, there becomes clear the need of his review on the part of an IT Engineer if one wants to take this SW up to commercial product.
