Reviewer’s report

Title: Systematic review: barriers to the use of reminder/recall interventions for immunizations

Version: 2 Date: 18 April 2012

Reviewer: Diana Bartlett

Reviewer’s report:

Major compulsory revisions:

The authors should include a logic framework based on their initial literature/background review that guides their search terms. Much work on this topic area has been covered by the Centers for Disease Control and Prevention’s Community Preventive Services Task Force. The search needs context. The authors acknowledge in the Conclusion that the issue of reminder/recall is complex, but their search does not reflect this complexity and their references do not provide enough context to explain their results in a robust way.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
