Reviewer's report

Title: Medication effectiveness may not be the major reason for accepting cardiovascular preventive medication: A population-based survey

Version: 2 Date: 16 May 2012

Reviewer: Themis Exarchos

Reviewer's report:

Major Compulsory Revisions

The paper is interesting and well written. The main innovation lies in the usage of a big sample of patients for producing the models. On the other hand, the methods and techniques proposes do not present any novelty and I recommend the rejection of the paper. This paper could be submitted to a medical journal only and not this one.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
