Reviewer's report

Title: Implementing computerised Aboriginal and Torres Strait Islander Health Checks in primary care for clinical care and research: a process evaluation.

Version: 3 Date: 9 August 2013

Reviewer: Michelle Greiver

Reviewer's report:

Thank you for the opportunity to review the authors' changes and comments. I think they have addressed my concerns and the other reviewers' concerns very well.

The context is much clearer now, and the additions to the literature and knowledge base are more apparent.

I appreciate the information about the Health Checks provided. I agree with the comments; I do not think a "generic health check" adds much value for many patients. A recurring health exam with attention to current chronic diseases and those for whom the patient is found to be at high risk is likely of more value than a "generic exam". These need to be tailored to the patient's context, which includes ethnicity. I think the database the authors are constructing may add knowledge as to what is likely useful or not useful for "health checks" in their context. This will likely be related to outcomes, which hopefully they will systematically measure.

I would support publication at this point.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
