Reviewer’s report

Title: Lessons Learned from Implementation of Computerized Provider Order Entry in 5 Community Hospitals: A Mixed-Methods Study

Version: 1 Date: 11 March 2013

Reviewer: Vivian Vimarlund

Reviewer's report:

The results presented are not unique. Several similar results have been reported in the last 10 years. To understand if this is still an issue in the USA, it is necessary to know more details about when the data was collected.

If this is new and recently data the article need a discussion about the reasons why apparently things have changed during more than a decade in the USA:

The authors need to deliver information about the time of the data collection.

They also said that they use a mixture of methods to collect data. It is not possible to see this mixture. The study is qualitative based and use different tools to collect data.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
