Reviewer's report

Title: V-Model: a new perspective for EHR-based phenotyping

Version: 4 Date: 4 July 2014

Reviewer: Yun Jang Jang

Reviewer's report:

Since the authors have corrected all issues pointed out during the first reviewing period, the revised paper looks good to me.

One minor thing is that the following sentence could be reworded. ‘enables in representing…’ -> ‘enables us to represent and understand …’

“Second, contrary to conventional methods, the model enables in representing and understanding implicit temporal information (P2).”

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
