Reviewer's report

**Title:** Developing a web-based information resource for palliative care: An action-research inspired approach

**Version:** 3  **Date:** 10 August 2007

**Reviewer:** David Currow

**Reviewer's report:**

I do not believe that the authors answer on response rates adequate addresses reviewer 2 comments. The other major issues are largely addressed. I agree with reviewer 2 that this is a major weakness in the paper especially in closing the loop in demonstrated improved uptake.

Having said this, the other issues have been dealt with and I believe if the authors were to acknowledge in the paper, that they did not have a denominator for their responses to the initial and subsequent surveys, nor subsequent utilisation data then the paper could be published.
