Reviewer’s report

Title: User experiences of evidence-based online resources for health professionals: User testing of The Cochrane Library

Version: 6 Date: 7 July 2008

Reviewer: J. F. Arocha

Reviewer’s report:

I believe that the authors have answered most questions acceptably. This version of the paper is certainly clearer than the previous one, presenting the needed detail. Therefore, I have basically no reservations regarding its publication. Although I think that, when available, providing numerical information in qualitative analysis only adds to its quality, I understand that this is only secondary in qualitative research. The argument made by Dr. Rosembaum regarding the authors’ goal of identifying emerging issues, rather than quantifying their presence, is a reasonable one.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
