Reviewer's report

Title: The nursing staff's experiences of falls among older persons with dementia. A cross-sectional study.

Version: 1 Date: 28 January 2011

Reviewer: Theo Dassen

Reviewer's report:

I have read the article from Solveig Struknes et al about nursing staff expierence ... falls among older persons.

It can be accepted after mayor revisions. The sample is not suitable to divide in two categories of nurses. Furthermore this is not necessary. It is enough to present the findings for all the nurses at all, and this makes the results much stronger.
