Reviewer's report

Title: Linking patient satisfaction with nursing care: The case of care rationing - a correlational study

Version: 2 Date: 20 June 2014

Reviewer: P Anne P Scott

Reviewer's report:

This is an interesting and timely article extending the work of the lead author, who has published previously on the topic of implicit rationing of nursing care.

Major Compulsory Revisions

There are no major revisions required.

Minor Essential Revisions

1. Background section, paragraph 2, lines 11/12, sentence commencing “The effect of the work environment on rationing...”
   the phrase ”..supporting that antecedents of missed care exist..” is unclear and potentially confusing. I recommend some rephrasing to clarify the point being made.
2. Statistical analysis section, paragraph 2 (final paragraph in this section). line 4 from end of section:
   “... BERNCA score were recorded into 6 levels...”
   The authors need to explain why and perhaps more importantly how this was done, in order for the reader to understand how the levels were generated. From my perspective this is the most substantive revision required to the manuscript. Without an understanding of the decisions made on this issue, it is difficult to really determine the actual relevance / robustness of the defined thresholds.

Discretionary Revisions (minor issues not for publication)

1. Review of the literature, paragraph 1, line 4 - I recommend changing the word “supporting” to “suggesting”

2. Review of the literature, paragraph 7 (the 3 lines immediately above the heading Purpose), sentence commencing “However, both studies investigated satisfaction...”
   This point could be stated more clearly.
3. Results section, paragraph two (immediately beneath insertion order for table 1) I recommend adjusting the text of Aim 1 to read as follows:
Aim 1: Relationship between patient satisfaction with rationing of nursing care and work environment ...

4. Results section, paragraph 4, line 3 the phrase “...slightly less frequently than rarely.”
This seems a very counter-intuitive way to express this point. Rephrasing may aid understanding.

**Level of interest:** An article of importance in its field

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** Yes, but I do not feel adequately qualified to assess the statistics.

**Declaration of competing interests:**
