Title: Practice Nurses' views of their role in the management of Chronic Fatigue Syndrome/Myalagic Encephalitis: a qualitative study

Version: 2 Date: 16 December 2008

Reviewer: Jocalyn Lawler

Reviewer’s report:

In the Results section (p2) the prose, while accurately describing the findings, could be read as a criticism of practice nurses and be seen as pejorative (in the put down sense) which is not what they are arguing when you get into the paper. It might be wise if this could be addressed so that the results do not make it appear to your readers that practice nursing are being "bagged". I suspect similar findings would appear if the sample consisted of GPs (as your research showed).

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
