Reviewer’s report

Title: Appendicectomies in Albanians in Greece: outcomes in a highly mobile immigrant patient population

Authors:

Athina Tatsioni (athina73@otenet.gr)
Antonia Charchanti (me00527@cc.uoi.gr)
Evangelia Kitsiou (jioannid@cc.uoi.gr)
John P.A. Ioannidis (jioannid@cc.uoi.gr)

Version: 2 Date: 15 Jun 2001

Reviewer: Dr S Reijneveld

Level of interest: A paper whose findings are important to those with closely related research interests

Advice on publication: Other (see below)

In their revised version, the authors provide much more information on the way in which they computed the odds ratios. I think that they sufficiently clarified their computations to make them interpretable for those readers who are used to computing odds ratios themselves (other readers may simply accept them as presented).

Regarding the other point, the statistical testing in table 2, I agree with the authors that following my proposal would lead to figures that overlap with those in table 1. I would probably not present statistics in the way that they do myself, but it is their paper and not mine.

In short, I think that they have satisfactorily dealt with my previous criticisms.
