Reviewer's report

Title: World Health Organization fracture risk assessment tool in the assessment of fractures after falls in hospital

Version: 2 Date: 23 January 2010

Reviewer: Eugene McCloskey

Reviewer's report:

The author has made substantial revisions and improvements to the paper. The power for the analysis of fractures after falls remains low, of course, but this cannot be altered.

Minor essential revisions - A number of spelling errors remain and the legend for Table 3 is incorrect (refers to falls rather than fracture after falls).

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
