Reviewer's report

Title: Cost-effectiveness of human papillomavirus vaccination for prevention of cervical cancer in Taiwan

Version: 2 Date: 2 December 2009

Reviewer: Jaume Puig-Junoy

Reviewer's report:

Discretionary Revisions

I suggest to consider in a more explicit way, in the discussion section, the main result differences of the results of this paper when compared to those of Dasbach et al, 2008. In fact, the authors should stress their hypothesis about how Dasbach et al could report that vaccination of 12-years old girls strategy in Taiwan is weakly dominated by no vaccination (note that, to my knowledge, this is the only paper in the literature with such a conclusion!).

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
