Reviewer's report

Title: Development and preliminary validation of a questionnaire to measure satisfaction with home care in Greece: an exploratory factor analysis of polychoric correlations.

Version: 2 Date: 13 May 2010

Reviewer: Marloes Zuidgeest

Reviewer's report:

The authors have revised their work very well. The quality of the paper has improved.

I have two main points:

1. One of the questions posed by BMC Health Services Research is: Is the question posed by the authors well defined? I still miss a research question. Please insert a research question.

2. In the discussion the authors now mention similarities with other studies on scale dimensions. I still miss the implication of the scales: Are the scores on the scales higher or lower in this study, and what does this say? Or what could explain the difference between the scales of the different studies? (p21)

All other points have been revised with satisfaction.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
