Reviewer's report

Title: Effectiveness of a Surgery Admission Unit for patients undergoing major elective surgery in a tertiary university hospital

Version: 2 Date: 26 October 2009

Reviewer: Mary Vaughan Sarrazin

Reviewer's report:

I only found two typographical errors that need correction:

Fifth paragraph of Methods (there are no page numbers provided in the manuscript):
"The following variables were recorded: patient demographics, main diagnose and procedure, etc....." (should be: 'main diagnosis')

First paragraph of Results:
"We included 6,053 main surgery interventions, which 3,003 of were done..." (should be: 'of which 3,003 were done....').

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
