Reviewer's report

Title: Improvement of primary care for patients with chronic heart failure: a pilot study.

Version: 2 Date: 17 November 2009

Reviewer: Kathleen Bennett

Reviewer's report:

The revision to the paper is acceptable - a further proof reading would improve some of the english e.g. start of results "A total of 654 GPs was informed about our project" should be 'GPs were informed' etc. Please check this throughout.

Table 2 might benefit from percentages in addition to numbers. 95% CIs might have also been considered.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
