Reviewer's report

Title: Quantitative measurements of inequality in geographic accessibility to pediatric care in Oita Prefecture, Japan: Standardization with complete spatial randomness

Version: 7 Date: 25 November 2010

Reviewer: Nadine Schuurman

Reviewer's report:

The authors made a genuine effort to incorporate revision suggestions and should be commended on being open to new methodological considerations. Some further English language editing and perhaps presentation of the graphics in colour. A good cartographer could make a positive contribution here.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
