Reviewer's report

Title: Effort Reward Imbalance in Quality of Life of Healthcare Workers in Military Hospitals under Reorganization

Version: 1 Date: 14 March 2012

Reviewer: Simone Weyers

Reviewer's report:

The authors examine whether chronic stress at work, as measured by the effort-reward imbalance model, is associated with psychological morbidity and quality of life in health care workers. It is an interesting study but I would recommend a major compulsory revision along the following aspects and suggestions that are mentioned in the attached report.

I will be happy to review a revised version. Thank you.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
