Reviewer's report

Title: Developing the specifications of a glaucoma screening intervention: A Delphi approach

Version: 2 Date: 6 February 2012

Reviewer: John Sparrow

Reviewer's report:

The authors are to be congratulated on an excellent piece of work on an extremely important topic. As indicated >50% of glaucoma in the UK remains undiagnosed and glaucoma is an important cause of irreversible blindness. Development of effective and cost effective methods of screening for this blinding disease are essential to reducing the burden of blindness caused by glaucoma. This work represents an important step forward in this quest for effective and affordable glaucoma screening.

The paper is well structured and written, the scientific content is robust, results clearly presented and the discussion and conclusions appropriate. I do not think that this paper requires any further revisions.

Level of interest: An exceptional article

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
