Reviewer’s report

Title: Effect of community-based health management on the elderly health: a prospective randomized control trial from China

Version: 3 Date: 5 May 2012

Reviewer: Roberto Forero

Reviewer’s report:

This is an important paper; however it is not clear what the intervention was. The authors need to explain in more detail about the level on intervention and how the different outcomes measures relate to the intervention.

The authors also need to indicate how they adjusted for confounders.

What about selection bias? The statement about family participation is not clear and requires clarification. Did the authors adjust for clustering/multilevel variables?

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
