Reviewer's report

**Title:** An exploration of the enablers and barriers in access to the Dutch Healthcare System among Ghanaians in Amsterdam.

**Version:** 2 **Date:** 26 February 2012

**Reviewer:** Ilse Blignault

**Reviewer's report:**

The revised manuscript is much better; I recommend it's acceptance for publication with just a couple of minor essential revisions as described below.

(1) **Background** - The second sentence does not make sense/read well. What about: "Community perceptions of health, such as cultural health beliefs and differences in understanding of diseases, have been linked to poor health care access."

(2) **Limitations and strengths of the study** - Last sentence seems unfinished. What about: "The diversity of the participants contributes to the potential for transferability of the findings to other Ghanaian migrant communities."

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests
