Reviewer's report

**Title:** Discrepancies Between The Medical Record and The Reports Of Patients With Acute Coronary Syndrome Regarding Important Aspects Of The Medical History.

**Version:** 2  **Date:** 21 February 2012

**Reviewer:** Petr Ostadal

**Reviewer's report:**

Eze-Nliam et al. in their manuscript “Discrepancies between the medical record and the reports of patients with acute coronary syndrome regarding important aspects of the medical history” describe comparison of medical history of 13 health conditions obtained from medical record and patients questionnaire. They found significant discrepancies, especially history of angina was differently reported in medical record and questionnaire.

Major revisions
None.

Minor revisions
None.

Discretional revisions
The odds ratio of agreement in individuals with at least some college education is reported to be significantly different, however, according to the Table 4 the P-value is 0.053

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
