Reviewer's report

Title: Reproductive health service utilization and associated factors among adolescents aged 15-19 years in Gondar town, Northwest Ethiopia.

Version: 2 Date: 14 January 2013

Reviewer: Neelofar Sami

Reviewer's report:

1. The authors have tried to address the comments made by the reviewer for the initial manuscript.
2. However, there are still English language problems in the manuscript such as
   a. In the abstract the second line “many adolescents are less informed, less experienced and less comfortable accessing health services for reproductive health” could be better written as “many adolescents are less informed, experienced and comfortable accessing health services for reproductive health”
   b. The sentence in the 4th line of abstract starting from “especially” could be better written as “This is especially true for adolescents in Sub Saharan Africa-----”
   c. In abstract “Millennium Development Goal especially goal 4-6”. This has to be written as “Goals”.
   d. In the abstract, the objective needs to include “the name of the place too”
   e. In the abstract, under the heading of Results, the sentence must be written as “out of the total adolescents, 79.5% and 72.2% utilized FP and VCT service respectively”. This comment is similar for whole manuscript.
   f. In the Background, “too early pregnancy” is not the right word. It could be “teen age pregnancy”

These are few examples and similar problems are there throughout the manuscript. If the language of the manuscript is corrected appropriately, the manuscript could be considered for publication.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
