Reviewer’s report

Title: Healthcare provision for HIV co-infected tuberculosis patients in rural Zambia: an observational cohort study at primary care centers

Version: 8 Date: 29 August 2013

Reviewer: Monde Muyoyeta

Reviewer’s report:

Discretionary revisions

The authors have now shown that death explained some of the low enrollment to HIV care but in fact not all. I think it would be good to show how the proportion of enrollment changes when those that died are removed from the denominator. In fact what still shows is the the proportion that enrolled was still low even when accounting for those that died.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
