Reviewer's report

Title: Developing process guidelines for trauma care to severely injured patients: Results from a Delphi study

Version: 3 Date: 9 August 2012

Reviewer: Carmen Hall

Reviewer's report:

Major Compulsory:
1) The manuscript needs further editing. In addition, explanation of "112" should be provided.

2) Reconsier conclusions. I am unclear if the intent is to limit the results of the Delphi process to the Dutch system or if the authors intend international applicability as they refer to the international standard yet do not limit application to the Dutch system. For example the "Conclusion" section and P.20 where the authors state that their study can be seen as a "new field standard" in trauma care.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
