Reviewer’s report

Title: Acceptability and feasibility of integrating Tuberculosis Screening and Detection in post natal services

Version: 2 Date: 15 December 2012

Reviewer: Joyce Prof JoyceOlenja

Reviewer’s report:

1. Major Compulsory Revisions (NONE)

2. Minor Essential Revisions

Results: line 4 insert brackets (10)
Line 6 of results in abstract delete (it is)
Abstract conclusion line 4 insert of cases----

Development and Pretesting
Line 3: add the intention
Evaluation: Insert full stop (.) after methods in line one
Discussion/Conclusion line 24: the actual number of cases

3. Discretionary Revisions

-In the discussion and conclusion of the paper the authors acknowledge that the prevalence of TB is low and therefore the intervention at PNC may have to be based on further deliberations informed by the epidemiology of TB in the country. PNC attendance is (just about 20%) is not so well attended as ANC (90%+ for first visit) according to the Kenya Demographic and Health Survey 2008/9). Does this study also suggest raising the profile of PNC and increasing attendance?

-Service provider training aside, what are the implications of this additional service for staff workload?

-In the exit interviews explain what the clients were expected to look for that informed their perception of competence of service providers. How objective was the client assessment?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
